

SpyNoMore

Computer hackers seeking financial gain rather than thrills or notoriety are increasingly flooding the Internet with malicious software code (spyware, adware, key loggers, trojans). They are infecting computers with highly sophisticated programs that record surfing habits, bank passwords and other key financial data and send them to crooks over the Internet. These programs can be hard to spot, disguised in downloads such as toolbars, search engines, browser accessories, screen savers and other seemingly helpful utilities. SpyNoMore anti-spyware safeguards your identity and restores system performance through fast, smart and powerful spyware protection.

SpyNoMore®; Key Features

Huge Anti-Spyware Database guarantees removal of existing infections

Active Protection blocks new spyware BEFORE they infect your PC

Host Blocking ensures that known spyware-spawning websites are always blocked

Vaccination feature inoculates your system against inbound threats

Ticket-Based HelpDesk ensures a timely and professional response

Custom Fix™; (patent pending) is a very powerful system which removes any persistent infection. Say for instance your PC is infected with a very stubborn spyware program and nothing that you have tried has helped remove this infection. SpyNoMore's Custom Fix™; (patent pending) feature scans your PC and allows you to upload the scan report to our server for manual analysis by our Technical Staff. Your report will be reviewed and a customized Fix will be sent back to you via SpyNoMore, thereby guaranteeing full and permanent removal. No other anti-spyware software offers such feature!

Spyware Research

SpyNoMore's Spyware Research Team is committed to providing you with the latest protection updates against spyware. We continually thrive to keep SpyNoMore a step or two ahead of spyware programs by dedicating a full research team whose purpose is to update the protection databases so that your computer will always be protected against the latest threats. SpyNoMore anti-spyware gives you perfect spyware protection.

Symptoms that your PC is Infected

You receive frequent popup advertisements

Your homepage taken over by an unfamiliar website

Your computer becomes increasingly sluggish

A new toolbar is added to your Internet Explorer browser

Your browser is slow to open and / or requested pages are slow to load

Your searches are redirected to unfamiliar websites

Your system becomes unstable or you encounter frequent computer errors

Your computer connects itself to the internet or sends email messages without your permission

You see unknown or suspicious processes in the list of running tasks

Unknown software is installed on your computer without your permission

Unknown users connect to your computer remotely without your permission

You experience a surge in unsolicited emails arriving at your inbox

These are just some of the symptoms of spyware. Spyware is capable of more sinister activities such as stealing your passwords, credit card details and bank account logins.
